
Motherboard specifications, M2N68-LA (Narra6)

Sep 11, 2010 MB has both CMOS and Power on tests I recently bought the HP nr 146 motherboard and I can not get it to start up - it gives . Oct 21, 2007 i have a atx computer and i need the motherboard manual for it. Dec 21, 2007 P41H atx case - how

to test the power supply - power supply question. A: researcher jumped in here too late. If you have access to a HexRays decompiler I would recommend it. (Its free) Download it and then do a search on your motherboard. I have found plenty of manuals from the Intel website in the past. EDIT: You can use a search engine to find the keyword "cmos" and some websites may have images of the manual. Q: Selecting a new file after a file has been dropped on a Mac app using Swift 3 I have a use case for selecting a file from the user's local machine (available on dropbox) after a file has been dropped on a Mac app. I am currently developing a File system app that opens a window when a file is dropped on it. The problem I have is that I need to be able to send the new file's path to the Mac app on the other side of the "window". I was hoping that I could do something like this in my viewDidLoad() method: let documentsURL = URL(fileURLWithPath:

```
"\\(documents)/^(document.documentUUID).pdf") let url = NSURL.init(fileURLWithPath: documentsURL.path!) But that throws a "*** Cannot convert value of type 'URL' to expected argument type 'NSURL'" error. Any idea what I'm missing?
```

Thanks in advance for any help. A: Well, you need to understand NSURL is used to get a file path so you need to get the file path of document first then you need to load a file path from a file with NSURL using NSFileManager :

```
fileManager.fileExists(atPath: documentsURL.path!, isDirectory: nil) if let documentsDirectoryPath = NSSearchPathForDirectoriesInDomains
```
